DETAILED ACTION

Applicants preliminary amendment of claims 3, 5, 7 to 14, 17, 18, 20, 21, 23, 25 to 28, 32, 34 and 36 and the addition of claims 39-42, in the paper of 1/29/2001, is acknowledged. Claims 1-42 are at issue and present for examination.

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in response to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-13, drawn to a method for the production of a polypeptide having enhanced kinase activity and a polynucleotide encoding said polypeptide.

Group II, claim(s) 14-20, 28, 39-41, drawn to a method for the production of a polypeptide having enhance kinase activity and a polynucleotide encoding said polypeptide said method using the encoding polynucleotide.

Group III, claim(s) 21, 23-27, 37, drawn to a polypeptide having nucleoside or nucleotide kinase activity for a nucleoside or nucleotide analog.

Group IV, claim(s) 22, drawn to an antibody specifically recognizing the polypeptide of claim 21.

Group V, claim(s) 29, 30, drawn to a method for identifying an inhibitor of a nucleoside or nucleotide kinase.

Group VI, claim(s) 31-34, 42, drawn to a method for the production of a pharmaceutical composition.

Group VII, claim(s) 35, drawn to a use of an inhibitor of a nucleoside or nucleotide kinase.

Art Unit: 1652

Group VIII, claim(s) 36, 38, drawn to a method for the preparative synthesis of a nucleoside phosphate analog.

Further should applicants elect invention I above, restriction to one SEQ ID NOS: 1 to 13 is also required under 35 U.S.C. 121 and 372.

The inventions listed as Groups I through VIII do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Where a group of inventions is claimed in an application, the requirement of unity of invention shall be fulfilled only when there is a technical relationship among those inventions involving one or more of the same or corresponding special technical features. The expression "special technical features" shall mean those technical features that define a contribution which each of the claimed inventions, considered as a whole, makes over the prior art. Group I and Group II do not share a special technical feature, as Group I encompasses chemical synthesis methods and Group II encompasses only methods based on the use of a polynucleotide. Similarly groups V-VII comprise steps that are separate and distinct from each of the additional listed groups. Further groups III and IV drawn to the polypeptide and antibody products share no "special technical feature with either of the product groups or the method groups. Thus, any shared technical feature of the groups is not a "special technical feature", unity of invention between the groups does not exist.

The inventions listed as SEQ ID NOS: 1 to 13 do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features by virtue of their different amino acid sequences.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

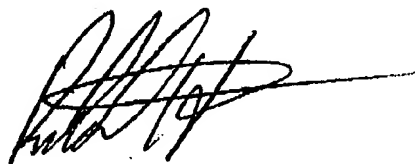

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
